NOTICE OF ORAL EX PARTE PRESENTATION

Dear Mr. Caton:

In accordance with Section 1.1206(a)(2) of the Commission's Rules, I am writing to inform you that on this date Alex Netchvolodoff of Cox Enterprises, Inc. ("Cox"), and Werner Hartenberger and J.G. Harrington of Dow, Lohnes & Albertson, representing Cox, met with Commissioner Rachelle Chong and Richard Welch of Commissioner Chong's staff to discuss Cox's position in the above-referenced proceedings, as described in the comments filed by Cox. During this meeting, the Commission participants were provided with a report on the status of N11 service, which was included as Appendix B to the comments filed by Cox and other parties on August 19, 1994 in these proceedings, and with additional materials summarizing Cox's position and the positions of other parties. Copies of the additional materials are attached to this letter; a copy of the report is not attached because it already is a part of the record in these proceedings.

In accordance with the requirements of the Commission's Rules, copies of this letter are being provided to all Commission participants in the meeting and an original and one copy of this letter are being filed with the Secretary's office under IAD File No. 94-101. In addition, two copies of this letter are being submitted for inclusion in the file for CC Docket No. 92-105.

CC Docket No. 92-105 (2 copies)

N11 SERVICE

The following is a discussion of issues relating to N11 service, which was first proposed by Cox Enterprises in August, 1991 and which now is operational in Atlanta, Georgia; West Palm Beach, Florida; and Nashville, Tennessee. In CC Docket 92-105 and IAD File No. 94-101, the Commission is considering whether to require local exchange carriers to offer N11 service, and many states have pending proceedings on the same question.

What Is N11 Service?

Cox first conceived of N11 service in 1991. N11 service uses the existing three-digit dialing arrangements in the form of N11 (*e.g.*, 211 or 311) for access to local information services. N11 service is modeled on local directory assistance, which provides abbreviated, inexpensive access to specifically local information. N11 service has four elements: (1) Use of N11 numbers; (2) local assignment; (3) rating and recording; and (4) billing and collection. These are precisely the features used by telephone companies for 411-based directory assistance.

N11 Service Meets a Specific Need

N11 service fills a gap in the range of telephone services available to information services providers. Local information services providers need access arrangements that are targeted to the local calling area and that permit them to recover their costs through modest charges to consumers who call their services. (Free call arrangements are not satisfactory because there is no practical way to recover costs.)

Before N11 service, there were no access arrangements specifically designed for or suited to local information services providers. Other pay-per-call services, such as 976 and 900, were designed to cover wider areas than the local calling area. These services are very expensive, on the order of four to ten times more expensive than N11 service in the BellSouth region. Consumers also are wary of 976 and 900 services because bad actors have tainted the reputation of those services. The Commission is particularly aware of the problems of 900 service from its own rulemaking proceedings. Consumer discomfort with 900 numbers is amply illustrated by the drastically declining call volumes for 900 services, with a reported decline of 50 percent from 1992 to 1993.

Other existing alternatives to N11 service also do not meet the need. Regular telephone numbers do not accommodate pay-per-call services. Similarly, pay-per-call services specifically have been forbidden on 800 numbers and, in any event, 800 service is much more expensive than N11 service. There also are proposals for the development of other services, such as alternative abbreviated dialing arrangements, but those services generally are in early stages of development and will not be available in the near future.

N11 Service Has Been Enormously Successful Where It Has Been Offered

Cox is now using N11 service in communities in two states, Florida and Georgia. The Florida trial began in March, 1993 and the Georgia trial began in September, 1993. The experience in both states has been uniformly positive. To date, there have been more than 1.3 million calls to the two numbers. (In comparison, parallel services using 900 numbers, which have been priced at the cost of obtaining the 900 transport service, have had call volumes of less than seven percent of the volumes of the N11 services.) Moreover, the complaint rate in each market consistently has been below 8/100 of one percent, an extraordinarily low rate for a pay-per-call service. In contrast to 900 service, call volumes for the two N11 services are steady or increasing and have not experienced any precipitous declines.

Cox's market research shows that consumers like N11 service much more than 900 service. They trust the information provided through N11 service more than the information provided through 900 service and they greatly prefer the pricing structure of N11 service. At the same time, there is no evidence of confusion from N11 service from Cox's market research, from customer service calls or from complaints to regulators by consumers or by emergency services providers.

The experience in Florida and Georgia has been so positive that the Public Service Commissions in both states decided to expand the availability of N11 service from the single trial cities to assignment of all available numbers within local calling areas throughout their entire states. These decisions were made based on reports from Cox, which was operating the trial services, and on the recommendations of the Public Service Commission staffs in both states to expand the availability of N11 service. The Tennessee Public Service Commission, based on the results in other states, decided to make N11 service available state-wide from the outset.

N11 service also gives information services providers in small communities a previously-unavailable avenue to provide their services. In both Georgia and Tennessee, the Public Service Commissions have granted requests for N11 service from rural newspapers which intend to bring local information services to their readers. The local nature of N11 service will permit these newspapers to target their actual audiences, rather than forcing them to make their services available to a larger population that will not be interested. The local nature of N11 service also results in costs that are tied closely to the population of the area served by the information services provider. This means that the costs of obtaining service in rural areas are significantly less than in urban areas, which is not the case for 900, 976 and other services. The National Newspaper Association, which represents smaller newspapers, has endorsed N11 service as the only available means to permit small newspapers to offer information services to their communities.

None of the Problems Feared by Opponents of N11 Service Have Materialized

Opponents have suggested that N11 service will result in a variety of harms. Evaluation of the results of the N11 trials and of other activities since the Commission issued its N11 rulemaking shows that these fears have not been realized.

The first fear was that N11 numbers would be needed for area codes. There never was a meaningful prospect that N11 numbers would be used for area codes, and the upcoming implementation of interchangeable area codes has rendered this concern irrelevant. In fact, North American Numbering Plan Administration concluded close to a year ago that there would be no need to use either N11 numbers or N00 numbers for area codes.

The second issue raised by opponents was that customers would be confused by the implementation of N11 service, and particularly that there would be confusion with existing 411-based directory assistance or with 911. The two trials in Florida and Georgia, with their cumulative experience of 30 months and more than 1.3 million calls reveals that customers are not confused by N11 service. There have been no complaints or any other indication of customer confusion in either state.*

The third fear of N11 opponents was that demand for N11 service would overwhelm the supply of numbers. Experience in Florida, Georgia and Tennessee shows that, while there is a definite market for N11 service, it is limited to a specific group of entities with a need for an inexpensive, specifically local service.

*/ Even while raising concerns about customer confusion from N11 service, some LECs have implemented their own new services using N11 numbers. For instance, Bell Atlantic recently began using 611 for access to repair service in the Washington, D.C. area. Despite the similarity of the number 611 to 911, Bell Atlantic does not appear to have taken any steps to prevent confusion. For instance, there is no indication that callers have reached repair service until well into any call to 611, and Bell Atlantic does not appear to have publicized this change in its service.

ASSIGNMENT OF N11 NUMBERS FOR "PUBLIC INTEREST" USES

Since the issuance of the Commission's Notice of Proposed Rulemaking on N11 numbers, there have been many suggestions for "public interest" uses of N11 numbers. Many of these proposals were submitted mostly in the hope of derailing N11 assignment, without any serious intention to implement them.^{1/} Some other proposals are more serious. Two of those proposals are for assignment of N11 numbers for access to telecommunications relay service and for a federal government information line. These proposals, which share similar flaws, are representative of the other proposals as well. Thus, the following discussion focuses on relay service and the federal government information line.

N11 Cannot Provide the Ubiquity Needed for These Uses

The first barrier to use of N11 numbers for these purposes is the difficulty of achieving ubiquity. These services, particularly access to relay service, must be available to all subscribers, without regard to where they happen to be located. Unfortunately, N11-based services cannot meet this requirement. For instance, even after twenty years of effort, 911 is not available to fully 25 percent of the access lines in the country and 65 percent of the geographic area of the country does not have access to 911. The availability of 411 is no more extensive than 911.

The difficulty in providing 911 and 411 is related to the characteristics of some of the switches now used in the telephone network. As a consequence, a solution to these difficulties will be expensive and will take a long time to implement. There are much simpler and less expensive alternatives that are available in the short term that would permit ubiquitous availability of access to relay service or to government information. Notably, 800 service is available today nationwide.

Commercial users do not require nationwide ubiquity because their uses are local in nature. In addition, commercial users can make a business judgment as to whether the service is available to enough customers to make it worth purchasing. Commercial uses in general are less sensitive to ubiquity than the non-commercial uses that have been proposed.

N11 Is Too Expensive for Non-Commercial Uses

Implementation of N11 service is expensive. As described above, there would be substantial expense associated with necessary modifications to make switches capable of handling N11 calls. Even after those modifications are completed, there will be substantial initial costs associated with the necessary programming of individual switches. Start-up charges for N11 service in the BellSouth region range from \$1,000 to \$85,000 for a single local calling area. Given that there are thousands of local

^{1/} For instance, some parties have argued for separate N11 numbers for fire, police and ambulance calls despite a twenty-year effort to consolidate all emergency calls on 911.

calling areas in the country, the start-up costs for a single nationwide N11 number easily could be in the tens of millions of dollars. In fact, the Florida Public Service Commission has estimated the start-up costs to be \$250 million for three numbers. Other services, such as 800 service, have practically no start-up costs.

N11 is expensive on an ongoing basis as well. BellSouth charges ten cents per call, in addition to the service charges already borne by the information services provider, for N11 service. Since N11 service is purely local at this time, this per call charge does not include access charges, which would add considerable per-call expense to every call. Thus, an interLATA N11-based service easily could have recurring charges that exceed those for 800 service.

N11 Is Best Suited for Purely Local Services

Most of the proposals for non-commercial services are nationwide in scope and contemplate, at a minimum, regional calling areas (*i.e.* areas covering multiple area codes). N11 numbers are best suited to more purely local uses, as is reflected by their current usage patterns. Given current network architectures, which assume local routing of N11 calls, it also is more difficult to implement non-local routing for N11 numbers.

There already are numbering resources that are adapted to regional or national uses. Notably, 800 service is designed for regional and nationwide coverage and the implementation of 800 number portability permits enough flexibility to route calls depending on where they originate. There also are regional uniform numbers available through existing Bell Operating Company tariffs.

There are no comparable resources available for purely local services except for N11 numbers. Services based on 976 and 900 numbers are regional and national, respectively, in scope, and priced accordingly. While N11 service would be very expensive if implemented on a nationwide basis, it is cost-effective for local services because it permits local information services providers to tailor the service they purchase to the customers they wish to serve.

Commercial Uses of N11 Numbers Serve the Public Interest

One issue that should not be lost in discussions of "public interest" uses for N11 numbers is that commercial uses of N11 numbers can and do serve the public interest. The Commission has long recognized that commercial entities can serve the public interest and, indeed, has made serving the public interest a basic requirement for such entities as broadcast licensees. Similarly, the public interest value of the commercial

offering of enhanced services was the driving force behind the Commission's Computer Inquiries. More recently, the Commission recognized that the public interest value of making PCS a reality outweighed the interests of non-commercial uses of the 2 GHz band, including public safety uses, when it reallocated that band to PCS.

The Cox newspapers in Florida and Georgia have made new and valuable forms of information services available to consumers, and it is only because of N11 service that those information services could be brought to market. The new services range from updates on important local news stories, such as a train accident in West Palm Beach, to a service that lets callers home in on the specific characteristics of products in the newspaper's classified ads that they want to buy. The extraordinary consumer acceptance of N11 service in both Florida and Georgia shows that consumers perceive significant benefits from these and the other services offered through N11.

The benefits of information services uses of N11 numbers are at least as great as other commercial uses that have been in place for years. These uses, including directory assistance call completion through 411, the use of 611 for access to unregulated inside wire repair and the use of 811 to order enhanced services such as voice mail, are convenient for local exchange carriers and consumers, but they do not advance the fundamental policy goals of this Commission or the Administration. Widespread dissemination of information and the development of information services by private enterprise are consistent with those goals and, as the experience in Florida and Georgia demonstrates, are advanced by the availability of N11 service. The public interest value of the increased availability of information in an easy-to-obtain form is significant, and the Commission should recognize that N11 service makes that benefit possible.

FIND-ITSM 511 BRINGS YOU THE WORLD

With the vast amount of information available today, isn't it nice to have something that helps you find just the information you want? That's what FIND-IT 511 Services are really all about. With just one number, 511, we have 3 distinct services to help you find what you're looking for.

YELLOW-PAGES-NOWSM Service. A friendly operator will help you find the products and services you need from businesses in the Atlanta area. Available in Spring 1994. See pages 4-5.

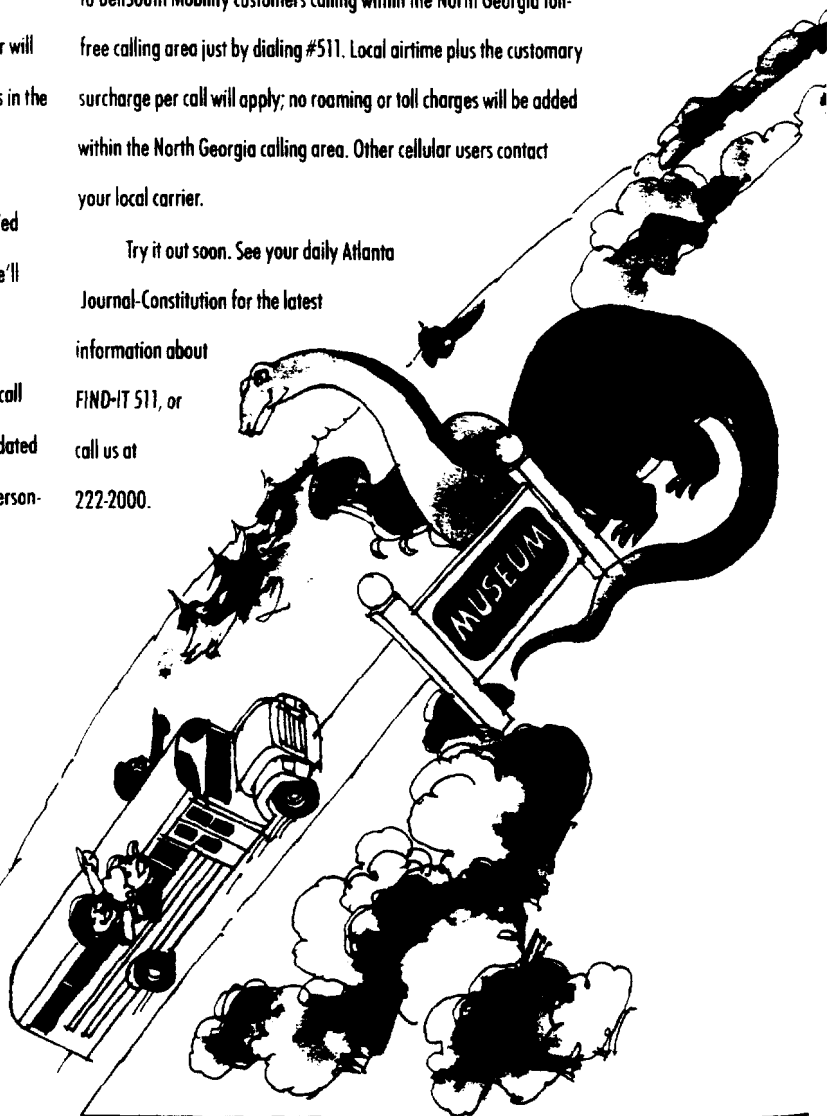

CLASSIFIEDS-NOWSM Service. We'll search the classified section and help you find whatever it is you're looking for. And we'll find it fast. Available in Spring 1994. See pages 6-7.

THE-ANSWER-MACHINESM Service. One number to call for the latest news, sports, weather and business information. Updated frequently. You can customize your own portfolio to get just the person-

alized information you want. See pages 8-22.

CELLULAR ACCESS. If you have a cellular phone, you'll really appreciate the ease and convenience of FIND-IT 511. It's available to BellSouth Mobility customers calling within the North Georgia toll-free calling area just by dialing #511. Local airtime plus the customary surcharge per call will apply; no roaming or toll charges will be added within the North Georgia calling area. Other cellular users contact your local carrier.

Try it out soon. See your daily Atlanta Journal-Constitution for the latest information about FIND-IT 511, or call us at 222-2000.

FIND-IT™ 511 is a Pay-Per-Call service. Calls to FIND-IT™ 511 cost 50¢ per call within the Atlanta, Georgia, calling area and will be billed on your monthly Southern Bell statement. Please refer to the Customer Guide Section of your Southern Bell White Pages to determine your calling area. Children under age 18 must have permission from parent or guardian before calling FIND-IT™ 511. ©InfoVentures of Atlanta 1993
NEVER CONFUSE 511 WITH 911. IF YOU HAVE AN EMERGENCY, CALL 911.

AVAILABLE
IN SPRING 1994

JUST ASK YELLOW-PAGES-NOWSM

Need a dry cleaner with a drive-in window? Looking for a Chinese restaurant in Buckhead that delivers? Saturday night and your car won't start? Call FIND-IT 511. In moments, our friendly operator can find the particular business you are looking for. And connect you directly, so you don't have to hang up and make another phone call.

YELLOW-PAGES-NOW gives you more information about Atlanta area businesses than The Real Yellow Pages.[®] You talk to a live operator, who searches through a complete and current database to find what you need.

WHAT BUSINESSES ARE INCLUDED? If they're in the Southern Bell Atlanta phone book, we know about them. We also have all government listings.

WHAT KIND OF INFO CAN I GET? We can give you the name,

address, part of town (Midtown, Sandy Springs), phone number and type of business. Usually, we can tell you if they accept credit cards or personal checks, hours of operation, years in business, brand names and certain characteristics (such as "Authorized Maytag[®] Dealer" or "carries NIKE[®] shoes").

Information is regularly updated. The service is easy, time-saving and as helpful as a friendly neighbor. And it costs just 50¢ per call.

WHAT IF I'M CALLING FROM MY CAR? Using

YELLOW-PAGES-NOW is a lot easier than carrying The Real Yellow Pages in your glove compartment! We'll find the business you're looking for and directly connect you. BellSouth Mobility customers call #511. Other cellular users call your local cellular carrier for information about FIND-IT 511.

See your daily Atlanta Journal-Constitution for the latest information about FIND-IT 511.

ASK THE ANSWER MACHINESM

Now, everything you need to know is at your fingertips. Find out how your stocks are doing, how your team is doing, what the Young are doing to the Restless — and just about anything else you can imagine. It costs just 50¢ per call for up to 5 minutes. Here's how:

1. Dial 511 on your Touch Tone phone.
2. Enter the 4-digit code of your selected topic.
3. To hear another topic, just press a new code.
4. There are two types of information lines in THE-ANSWER-MACHINE Service. General menu codes let you enter a category and listen to a list of all the information available in that category (Horoscopes 4676). Direct codes take you instantly to a specific piece of information within a category (Aquarius 3400). All direct codes appear in black in this directory.

THE-ANSWER-MACHINE is the easiest-to-use, most convenient service of this type ever offered. When you call, you'll never have to listen to a commercial. You'll almost never get a busy signal. You can stay on the line for up to 5 minutes, pressing any number of 4-digit codes, for just 50¢ per call. Charges will appear automatically on your monthly phone bill. Callers under 18 years of age must have parental permission before calling. Touch Tone phone only; not available on rotary or pulse phones. For a free demonstration of THE-ANSWER-MACHINE call 222-8999.

PERSONAL PORTFOLIOSM

FIND-ITSM
5 1 1
50 CENTS

Customize your own information portfolio within THE-ANSWER-MACHINE.

It's the easiest, fastest way in the world to get a variety of personalized information in minutes. You can get all the information you want at any time by pressing just one easy-to-remember personal code. Which also makes it great for cellular users.

HERE'S HOW IT WORKS.

Let's say you wish to check on how your stocks are doing. In addition, you want the latest local sports scores, your horoscope, Atlanta's weather and national news headlines. With PERSONAL PORTFOLIOSM Service, you can create your own personalized news program. Each time you call, you can get up to five categories of just the information you want without having to press the various codes.

OKAY. HOW DO I START?

Just select your direct codes and complete the application at the end of this section. Mail in your application, or FAX it to us at this number: 222-8034.

If the application is missing, or if you have any questions, call 222-2000.

WHAT ARE THE SET-UP CHARGES?

There are no set-up charges and no monthly minimum. You pay only 50¢ per call for up to 5 minutes. Charges automatically appear on your monthly Southern Bell bill.

HOW LONG DOES IT TAKE?

Once we receive your information, we will set up your PERSONAL PORTFOLIO and mail your PERSONAL PORTFOLIO number to you within just 48 hours.

CAN I CHANGE MY PERSONAL PORTFOLIO?

What if you sell a couple of stocks and buy some others? Or it's playoff time and you want to know how the competition is doing? No problem. You can automatically change your PERSONAL PORTFOLIO any time with a phone call.

WHAT ELSE SHOULD I KNOW?

If you don't want all the information in your PERSONAL PORTFOLIO each time you call, you can skip around. Jump forward to the next category by pressing 5; Press 2 to back up for a repeat.

So what are you waiting for? Sign up now.

See your daily Atlanta Journal-Constitution for the latest information about FIND-IT 511.

SPORTS LINE

Sports fans will wonder how they ever got along without it. Today's scores, inside stories, league standings, statistics and more. All major sports are covered. Just interested in local sports news? We have that, too.
